**STATE REGULATIONS**

14 Cal. Code Regs. § 15162 ..... 4 n.2

1 **INTRODUCTION**

2 California’s water boards have a legal duty to meaningfully address water contamination from  
3 irrigated agriculture in the Central Coast Region. Seeking to enforce this duty, Petitioners have filed  
4 this action to compel the State Water Resources Control Board (“State Board”) to impose legally  
5 sufficient regulations on agricultural polluters. The State Board demurs to Petitioners’ fifth cause of  
6 action, which claims that the Board violated the California Environmental Quality Act (“CEQA”) when  
7 it gutted the conditional waiver adopted by the Central Coast Regional Water Quality Control Board  
8 (“Regional Board”) without considering the resulting environmental impacts. The State Board argues  
9 that Petitioners failed to administratively exhaust this claim.

10 The State Board’s demurrer should be denied for three reasons. First, exhaustion was not  
11 required in this case because the State Board has an independent legal duty to determine whether it  
12 must conduct further environmental review under CEQA, and the record here made clear that such  
13 review was required. Second, even if exhaustion was required, public comments sufficiently apprised  
14 the State Board of the need to evaluate the effects of changing the waiver. And finally, Petitioners  
15 properly request relief in the form of a petition for writ of mandate compelling agency action in  
16 compliance with applicable law.

17 If the Court dismisses Petitioners’ CEQA claim, there will be no evaluation of the  
18 environmental effects of the State Board’s modifications. Dismissing this claim would allow the State  
19 Board to make uninformed decisions that rest on incomplete and misleading information. Dismissal  
20 would also keep the public from ever knowing the true impacts of a wide-reaching discharge permit  
21 that will remain in place for many years.

22 **BACKGROUND**

23 The Central Coast Region, home to some of the world’s most profitable farmland, is facing the  
24 consequences of decades of intense agricultural pollution. *See* Petitioner’s Opening Brief in Support of  
25 Petition for Writ of Mandate (“Pet. Op. Brief”) at 5-11 (describing severe pollution). To fix this  
26 ongoing problem, in March 2012, the Regional Board issued a conditional waiver to regulate  
27 discharges from irrigated agriculture (“2012 Waiver”). *See* Final Administrative Record—Regional  
28

1 Board (“RB”) 8465-8558. To accompany the 2012 Waiver, the Regional Board prepared a Subsequent  
2 Environmental Impact Report under CEQA. RB 8976-77.

3 Although the final 2012 Waiver was an improvement over the prior waiver, it was substantially  
4 weaker than the measures the Regional Board originally had proposed. Intervenors, Petitioners, and  
5 other parties to the administrative process filed petitions to the State Board challenging the 2012  
6 Waiver. *See* Final Administrative Record—State Board (“SB”) 1-1646. The State Board responded by  
7 issuing a stay of the 2012 Waiver and then a series of draft waivers revising its provisions. SB 5302-26  
8 (stay), 5645-5700, 6181-6255, 6390-6461, 6751-6825. Over a period of less than four months, the  
9 State Board released four different draft orders before issuing the final order on September 24, 2013  
10 (“Modified Waiver”). *Id.*; SB 7162-7234. The draft-and-comment process was a frantic one—for  
11 instance, parties had less than 24 hours to prepare for a September 10 board meeting by producing  
12 remarks on a September 9 draft containing “[v]ery significant revisions.” SB 6390-6461, 6462-65.

13 Despite the rushed nature of the administrative process, commenters, including Petitioners,  
14 managed to submit comments on the State Board’s draft modifications to the Regional Board’s 2012  
15 Waiver. For example, Petitioners criticized the State Board’s decision to allow monitoring in  
16 downstream receiving waters rather than at individual discharge sites because this change would make  
17 it impossible to evaluate individual dischargers’ compliance with the Modified Waiver’s conditions.  
18 SB 5735. Others explained that the State Board’s revisions would not halt groundwater contamination,  
19 SB 5814, and that the Regional Board’s ability to implement the Modified Waiver would be  
20 substantially limited, SB 5815; *see also* SB 5838. The public also noted that the State Board removed a  
21 valuable source of information about the Modified Waiver’s effectiveness by weakening nitrogen  
22 reporting requirements. SB 6554. Additionally, the State Board established an Expert Panel to review  
23 agricultural impacts to water quality, SB 7165, but commenters observed that these reviews would  
24 occur *after* the Board issued the Modified Waiver, allowing the Waiver’s adverse effects to continue  
25 unabated. *See* SB 5824. Finally, the Regional Board implored the State Board to consider new  
26 information in a report prepared by experts at U.C. Davis (“U.C. Davis Report”). SB 7163 n.2. The  
27 U.C. Davis Report was released immediately before the Regional Board finalized the 2012 Waiver, and  
28

1 it provided the latest and most comprehensive information on nitrate contamination and possible  
2 remedies in the Central Coast Region. *See generally* SB 3157-4802; Pet. Op. Brief at 14, 43-46.

3 Over the public's concerns, the State Board issued a Modified Waiver that made major changes  
4 to the 2012 Waiver. SB 7162-7234. Among other things, the Modified Waiver significantly weakened  
5 monitoring requirements, SB 6694; diluted enforcement mechanisms, SB 6204-05, 6414-15, 7186; and  
6 provided polluters with an escape valve from the Waiver's general requirements, SB 7187.

7 Petitioners filed a petition for writ of mandate to compel the State Board to revise the legally  
8 insufficient Modified Waiver. Among other claims (which are discussed fully in Petitioners' merits  
9 briefs), Petitioners claim that the State Board violated CEQA by failing to conduct supplemental review  
10 of the Modified Waiver despite the substantial changes proposed in the project and the availability of  
11 the U.C. Davis Report. The State Board demurs to this cause of action, alleging that Petitioners failed  
12 to administratively exhaust their CEQA challenge and misstated the legal standard for supplemental  
13 CEQA review in their writ petition.<sup>1</sup>

#### 14 **LEGAL STANDARD**

15 A demurrer tests the legal sufficiency of a complaint. *Young v. Gannon*, 97 Cal. App. 4th 209,  
16 220 (2002). In assessing a demurrer, a court must accept as true all material facts properly pled, as well  
17 as facts that may be implied or inferred from those alleged. *Montclair Parkowner's Ass'n v. City of*  
18 *Montclair*, 76 Cal. App. 4th 784, 790 (1999). A demurrer may be sustained only if the complaint,  
19 liberally construed, "fails to state a cause of action on any theory." *Kramer v. Intuit*, 121 Cal. App. 4th  
20 574, 578 (2004). Moreover, if there is a reasonable possibility a defect can be cured, a plaintiff should  
21 be granted leave to amend. *Young*, 97 Cal. App. 4th at 220.

#### 22 **ARGUMENT**

23 Exhaustion was not required in this case because the State Board has an independent, ongoing  
24 duty under CEQA to monitor the need for further environmental review, and it was apparent that  
25 further review of the Modified Waiver was needed. Even if exhaustion was required, the Petitioners  
26 did not have to use "magic words" by saying that "the [environmental impact report] is inadequate,"  
27

---

28 <sup>1</sup> Petitioners have set forth the correct standard of review in their opening merits brief. *See* Pet. Op. Brief at 15 n.11.

1 and public comments sufficiently apprised the State Board of Petitioners' CEQA concerns. *State Water*  
2 *Res. Control Bd. Cases*, 136 Cal. App. 4th 674, 795 (2006). Finally, Petitioners request the appropriate  
3 relief—a petition for writ of mandate compelling agency action—under California Water Code section  
4 13330.

5 **I. Exhaustion Was Not Required Because the State Board Has an Independent, Ongoing**  
6 **Duty to Comply with CEQA.**

7 **A. The State Board Has an Ongoing Duty to Determine If There Is a Need for**  
8 **Supplemental Environmental Review.**

9 CEQA's provision for environmental review is "the heart of CEQA" because it ensures that "the  
10 agency has, in fact, analyzed and considered the ecological implications of its actions." *Laurel Heights*  
11 *Improvement Ass'n v. Regents of Univ. of Cal.*, 47 Cal. 3d 376, 392 (1988) (internal quotation and  
12 citation omitted). Accordingly, a public agency must ensure that proposed projects undergo adequate  
13 environmental review. *See id.* at 390-92. Ensuring adequate environmental review means not only  
14 preparing legally compliant initial documents, but also continually evaluating whether further  
15 environmental review is needed under section 21166.<sup>2</sup> To comply with this mandate, an agency must  
16 monitor sources of new information and assess the impacts of changes to a proposed project. *See*  
17 *Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agric. Ass'n*, 42 Cal. 3d 929, 939 (1986); *Eller*  
18 *Media Co. v. Cmty. Redevelopment Agency*, 108 Cal. App. 4th 25, 43 (2003).

19 For CEQA to function effectively, it is the agency—not the public—that carries the ongoing  
20 duty to determine when supplemental review is necessary. As the California Supreme Court explained  
21 in *Concerned Citizens*, when the "actual project . . . differ[s] substantially from the [one] described in  
22 the EIR," "the primary duty to comply with CEQA's requirements must be placed on the public  
23 agency." 42 Cal. 3d at 938-39; *see also id.* at 939 ("It is up to the agency, not the public, to ensure  
24 compliance with CEQA in the first instance.") (quotation marks omitted); *Eller Media*, 108 Cal. App.  
25 4th at 44 (explaining that the *agency* "correctly determined that" there was "'new information' that was

26 <sup>2</sup> Three events require an agency to prepare a subsequent or supplemental environmental impact report ("EIR"):  
27 "(a) Substantial changes . . . in the project which will require major revisions of the [EIR]; (b) Substantial changes  
28 . . . with respect to the circumstances under which the project is being undertaken which will require major  
revisions in the [EIR]; [or] (c) New information, . . . not known . . . at the time the [EIR] was certified as complete  
becomes available." Cal. Pub. Res. Code § 21166; *see also* 14 Cal. Code Regs. § 15162(a)(1); *Laurel Heights*, 47  
Cal. 3d at 396.

1 not known and could not have been known at the time the final EIR was certified as complete”); *cf.*  
2 *Friends of the Clearwater v. Dombek*, 222 F.3d 552, 559 (9th Cir. 2000) (“It is the agency, not an  
3 environmental plaintiff, that has a continuing duty to gather and evaluate new information relevant to  
4 the environmental impact of its actions” under the closely related federal National Environmental  
5 Policy Act.) (internal quotation marks omitted). To make “faithful execution of [the duty to determine  
6 when supplemental review is necessary] contingent upon the vigilance and diligence of . . .  
7 environmental plaintiffs would encourage . . . agencies to evade their important responsibilities.”  
8 *Concerned Citizens*, 42 Cal. 3d at 939 (internal quotation marks omitted).

9       Because it is the agency’s duty to determine when supplemental review is necessary, no  
10 exhaustion is required. If this were a case in which the State Board prepared an EIR and Petitioners  
11 challenged that EIR’s adequacy, the State Board would have discharged its legal duty and Petitioners  
12 would have had to exhaust their claims by raising their objections to the State Board. In this case,  
13 however, Petitioners are challenging the State Board’s failure to conduct *any* supplemental  
14 environmental review of the Board’s changes to the 2012 Waiver, after the Regional Board certified the  
15 EIR. Because that is a purely legal issue—one that presents the purely legal question of whether the  
16 State Board had a legal duty and satisfied it—Petitioners did not have to exhaust. Indeed, the purpose  
17 of exhaustion is to ensure that an agency is apprised of all the relevant facts and issues, so that it can  
18 consider and fix any legal errors during the administrative process. *Ctr. for Biological Diversity v.*  
19 *Cnty. of San Bernadino*, 185 Cal. App. 4th 866, 890 (2010). That purpose is satisfied where, as here, an  
20 agency must *itself* evaluate the record to determine whether further environmental review is needed.  
21 *Cf. Sierra Club v. Cnty. of Sonoma*, 6 Cal. App. 4th 1307, 1313 (1992) (holding that when courts must  
22 determine whether supplemental environmental review is needed, courts look to the administrative  
23 record and consider new facts and issues that could cause environmental impacts not considered in the  
24 existing EIR).

25       In short, apart from any involvement by members of the public, it was incumbent on the State  
26 Board to independently assess whether more environmental review was needed when it elected, over  
27 Petitioners’ strenuous objections, to substantially alter the project under consideration. Neither  
28

1 Petitioners nor the public more generally has an obligation to point out the State Board's duty to  
2 comply with its legal mandates.

3 **B. It Was Plain that Subsequent Environmental Review Was Necessary in This Case.**

4 The administrative record in this case makes clear that additional environmental review, beyond  
5 the Regional Board's EIR, was necessary for the Modified Waiver. First, the State Board had at its  
6 disposal a mountain of evidence showing the significant water quality impacts of agricultural pollution  
7 in the Central Coast Region. Second, the State Board made major changes to the 2012 Waiver, and  
8 members of the public were vocal about the significance of these changes throughout the administrative  
9 process. Third, the State Board's reliance on the Expert Panel was a tacit admission of the need for  
10 further environmental review. Finally, the State Board was presented with, but refused to consider,  
11 critical new information in the form of the U.C. Davis Report.

12 The State Board was apprised that the impacts of agricultural pollution are substantial. As the  
13 Regional Board noted, the surface water and groundwater quality impairments associated with  
14 agricultural discharges are "well documented, severe, and widespread." RB 4849. In the Central Coast  
15 Region, groundwater accounts for about 83 percent of the water used for agricultural, industrial and  
16 urban purposes, and nearly 100 percent for rural domestic purposes (like drinking water). RB 5466.  
17 Low-income families, many of whom rely on this groundwater, are "forced to purchase bottled water in  
18 addition to paying for potable water service that is unsafe to drink." RB 5502. Many of these people  
19 work daily on the Region's farms, RB 5502, the same farms that contribute 83.6 percent of the nitrate  
20 pollution in the Central Coast Region due to the excessive application of fertilizers. RB 4891-92. Even  
21 if nitrate loading is reduced, these problems will likely continue to worsen for decades. SB 3241. In  
22 addition to serious nitrate pollution, the Regional Board concluded that the "levels of toxicity found in  
23 ambient waters of the Central Coast far exceed anything allowed in permitted point source[ ]  
24 discharges." RB 5452.

25 It was these serious impacts that led the Regional Board to adopt the 2012 Waiver. Although it  
26 lacked essential measures for curbing agricultural pollution, the 2012 Waiver was an improvement over  
27 the prior waiver issued in 2004. Among other things, the 2012 Waiver required dischargers to report  
28 nitrogen balance requirements, which the Regional Board viewed as the only requirement that would

1 allow it to reduce nitrogen loading. SB 6694 (further noting this reporting requirement “is not only  
2 basic and fundamental; it is also reasonable”); *see also* Pet. Op. Brief at 13-15, 18-27 (discussing how  
3 the 2012 Waiver, despite being weakened through successive drafts, was still better than the 2004  
4 Waiver).

5 In 2013, however, the State Board gutted the 2012 Waiver without performing additional  
6 environmental review, even though the 2012 Waiver had serious deficiencies and pollution in the  
7 Central Coast Region was surpassing critical levels. For instance, the State Board inserted Provision  
8 87.5, which essentially provides the worst dischargers with an escape valve from the Waiver’s general  
9 requirements. SB 7187. This provision downgrades the requirement from “effectively control[ing]”  
10 discharges to merely “implement[ing] management practices.” SB 7817. It stood to reason that this  
11 stripped-down standard would result in new or different impacts from those considered in the original  
12 EIR. In addition, even while admitting the “necessity of providing targets to encourage and measure  
13 progress in reducing pollutant discharges[,]” the State Board deleted the requirement to report nitrogen  
14 balance ratios. SB 7215-16. The State Board itself identified “eliminat[ing] calculation and reporting  
15 of nitrogen balance ratios” as the “most significant revision[ ]” to the 2012 Waiver. SB 7230.

16 These were not the State Board’s only changes. The State Board vitiated the 2012 Waiver’s  
17 Provision 11 by eliminating the requirement that dischargers demonstrate “a reasonable chance of  
18 *eliminating* toxicity” within the permit period of five years. SB 7342-43 (emphasis added). In place of  
19 this provision, the State Board required only that discharges demonstrate “a reasonable chance of  
20 *improving* water quality and/or *reducing* pollutant loading.” SB 7342-43 (emphasis added).

21 Additionally, the State Board replaced Provision 44(g) of the 2012 Waiver, which required that each  
22 farm have a plan containing a “[d]escription *and results* of methods used to verify practice  
23 effectiveness and compliance with this Order,” with a provision that requires only a description of the  
24 *methods* for assessing the effectiveness of such practices. SB 7190 (emphasis added). Because these  
25 substantial modifications to the 2012 Waiver will result in significant new environmental impacts not  
26 considered in the Regional Board’s EIR, further environmental review was required.

27 The need for further review was not only self-evident, it was made clear by members of the  
28 public. One comment letter to the State Board worried that “this regulation borders on a very large

1 social experiment that has extremely high stakes for both the environment and the Central Coast  
2 communities.” SB 6370-71. Another coalition was “incredibly concerned because, as revised, the  
3 [Modified Waiver] is insufficient to effectively halt the widespread groundwater contamination  
4 attributable to irrigated agriculture in the . . . Region.” SB 5814. That coalition’s representative echoed  
5 those concerns in a public hearing: Restricting nitrogen reporting requirements “severely limits the  
6 amount of information that [the State Board will] have moving forward to determine the efficacy of the  
7 program,” and the information the State Board “ha[s] now is not sufficient . . . to determine the impact  
8 of [the] order.” SB 6554.

9         Moreover, the State Board refused to consider new information in the form of the U.C. Davis  
10 Report. SB 7163 n.2. As Petitioners have explained, this report provided the latest and most  
11 comprehensive information on nitrate contamination and possible remedies in the Central Coast  
12 Region. The State Board admitted the “high significance of the information and analysis” in the U.C.  
13 Davis Report, but concluded that “the administrative record already before us contains sufficient  
14 evidence of the impact of agricultural practices on drinking water in the Central Coast region as well as  
15 practices that may ameliorate the problem.” SB 7163 n.2. The State Board’s conclusion was incorrect,  
16 *see* Pet. Op. Brief at 43-46, and the Board fell short of its duty to conduct further review when  
17 presented with this significant new information.

18         The State Board knew that the effects of its changes to the 2012 Waiver could be significant,  
19 and it knew that they were largely unknown—indeed, that was the reason the State Board created an  
20 “Expert Panel.” Broadly, the State Board tasked the Expert Panel with evaluating “the groundwater  
21 issues contested in the petitions” and “certain issues related to the impact of agricultural discharges on  
22 surface water.” SB 7165. The State Board punted a number of specific issues to the Expert Panel,  
23 ranging from “evaluat[ing] the [State Board’s] selection of appropriate indicators of risk to water  
24 quality,” SB 7181, to “considering appropriate structures and methodologies for monitoring that may  
25 support long-term nitrate control efforts, SB 7191, and “consider[ing] . . . approaches to identification  
26 of problem discharges.” SB 7199. Parties lamented that the Expert Panel “allows for further delay in  
27 implementing orders to protect water quality.” SB 5824.

1 In short, the State Board made substantial changes to the 2012 Waiver, and new and important  
2 information came to light after the Regional Board certified the EIR. Both the changes and the new  
3 information could cause or reveal significant environmental impacts not considered in the Regional  
4 Board’s EIR. Yet the State Board not only failed to conduct supplemental review of the potential  
5 effects of significantly changing the 2012 Waiver, there is no evidence the Board even thought about  
6 whether such review was required. Given that the State Board had an ongoing duty to consider whether  
7 supplemental environmental review was needed, Petitioners were not required to exhaust their CEQA  
8 claim, especially because the need for such review was clear in the record.

9 **II. Even If Exhaustion Was Required, Petitioners Met That Requirement.**

10 **A. To Exhaust, Parties Must Apprise the Agency of the Relevant Facts and Issues;  
11 Parties Need Not Recite “Magic Words.”**

12 The exhaustion doctrine provides public agencies an opportunity to respond to parties’ concerns  
13 before the parties turn to litigation. *See State Water Res. Control Bd. Cases*, 136 Cal. App. 4th at 794.  
14 Thus, if exhaustion is required, the question for a reviewing court is whether the public fairly raised an  
15 issue during administrative proceedings so that the agency had “an adequate opportunity to address”  
16 that issue.<sup>3</sup> *Id.* at 795.

17 To meet this standard, Petitioners do not need to cite the controlling statute; a party exhausts as  
18 long as the agency is “apprised of the relevant facts and issues.” *Ctr. for Biological Diversity*, 185 Cal.  
19 App. 4th at 890. Nor are Petitioners required to “identify[ ] the precise legal inadequacy” at issue.  
20 *Save Our Residential Env’t v. City of W. Hollywood*, 9 Cal. App. 4th 1745, 1750 (1992). Indeed,  
21 Petitioners do not need to recite the “magic words ‘the EIR is inadequate’”—or, in this case,  
22 “supplemental environmental review is required”—in order to exhaust. *State Water Res. Control Bd.*  
23 *Cases*, 136 Cal. App. 4th at 795. Instead, courts look to the “true character of the[ ] challenges” to  
24  
25  
26

27 \_\_\_\_\_  
28 <sup>3</sup> Comments from any party, not only a petitioner, satisfy the exhaustion requirement. *Bakersfield Citizens  
for Local Control v. City of Bakersfield*, 124 Cal. App. 4th 1184, 1199-1200 (2004).

1 determine if the relevant issues were addressed. *Id.* at 793.<sup>4</sup> In short, to exhaust, Petitioners need only  
2 “fairly apprise[ ]” the agency of the “substance of the issue[s].” *Save Our Residential Env’t*, 9 Cal.  
3 App. 4th at 1750; *see also Sierra Club v. Tahoe Reg’l Planning Agency*, 916 F. Supp. 2d 1098, 1109  
4 (E.D. Cal. 2013) (A party’s objections only need to be “sufficiently specific so that the agency has the  
5 opportunity to evaluate and respond to them.”) (quoting *Tracy First v. City of Tracy*, 177 Cal. App. 4th  
6 912, 926 (2009)).

7 **B. Public Comments Were Sufficiently Specific to Apprise the State Board of the**  
8 **Relevant Facts and Issues.**

9 The general public raised comments sufficient to apprise the State Board of the substantial  
10 impacts that would follow from the Board’s significant revisions to the 2012 Waiver. Despite those  
11 comments and revisions, the State Board neither conducted subsequent CEQA analysis nor even  
12 affirmatively determined that such analysis was unnecessary.

13 Interested parties emphasized the significant impacts of critical *substantive* changes to the 2012  
14 Waiver from the outset. Chief among these concerns was the conviction that the changes would gut the  
15 Regional Board’s ability to implement the Modified Waiver effectively. SB 5815 (The “proposed  
16 revisions substantially and illegally limit the ability of the [Regional Board] to implement the order”).  
17 Interested parties explained that restricting certain reporting requirements “severely limits the amount  
18 of information that [the State Board will] have moving forward to determine the efficacy of the  
19 program,” and the information the State Board “ha[s] now is not sufficient . . . to determine the impact  
20 of [the] order.” SB 6554. The uncertainty surrounding the significant impacts of the State Board’s  
21 draft order led one party to comment that “[o]ne would think that an unprecedented regulation of this  
22 scale would have been subjected to some sort of predictive analysis.” SB 6370-71. Even the Regional  
23 Board felt hamstrung by the State Board’s changes, noting that the “reporting requirements [absent in  
24 the updated draft order] are the only requirements that will allow the Central Coast Water Board to  
25 measure progress to reduce nitrate loading over time to better protect water quality.” SB 6694. These

26 \_\_\_\_\_  
27 <sup>4</sup> *See also Ctr. for Biological Diversity*, 185 Cal. App. 4th at 889-90 (holding that comments about “water supply  
28 issues” exhausted a CEQA claim that the agency failed to include a statutorily required water supply assessment  
in its Final EIR); *Save Our Residential Env’t v. City of W. Hollywood*, 9 Cal. App. 4th 1745, 1750 (1992) (holding  
that comments regarding the negative effects of a project in a specific community exhausted a CEQA claim  
regarding the analysis of alternative sites).

1 and other comments drew the State Board’s attention to the potentially broad environmental and  
2 operational implications of its changes. At a minimum, the comments revealed that the Modified  
3 Waiver’s potential effects were uncertain.

4 Many parties were equally vocal about the significant impacts that would result from removing  
5 *monitoring* provisions in the 2012 Waiver. The Regional Board had stated that “[d]etermining the  
6 relative contribution of pollution from individual dischargers is the necessary next step to resolve the  
7 severe water quality problems [in the Central Coast Region].” RB 4850. Accordingly, one group of  
8 concerned citizens warned the State Board that, “[b]y eliminating both [monitoring and nitrogen ratio  
9 balance requirements], the [Board] has severely hampered this program’s ability to address one of  
10 the . . . Region’s most severe and pervasive problems, contaminated groundwater.” SB 5838. Another  
11 coalition lamented that the “significant changes proposed . . . provide insufficient information to  
12 enforce the order or to evaluate the relationship between farm practices and water quality.” SB 6261.  
13 The State Board’s frequent and successive revisions were especially problematic, as they “resulted in a  
14 much-reduced capacity to evaluate nitrate loading and effectiveness of on[-]farm management  
15 practices, both of which are ultimately necessary for the prevention of continued impacts on water  
16 quality, specifically quality of groundwater used for drinking water in rural households.” SB 6716  
17 (comments on third draft). The likelihood of significant new environmental effects was apparent from  
18 these comments.

19 The public’s comments about the Modified Waiver’s significant environmental impacts and the  
20 clear lack of information about the extent of these impacts were sufficient to apprise the State Board of  
21 the need to conduct additional environmental review. As mentioned above, the purpose of the  
22 exhaustion requirement is satisfied if agencies have the opportunity to address the issues that form the  
23 basis of a petitioner’s challenge. During the administrative process, the State Board heard parties’  
24 concerns regarding the substantial nature of the changes it made to the 2012 Waiver. And it heard  
25 parties’ concerns regarding the lack of information about the environmental effects of the Modified  
26 Waiver. Though no parties said the magic words “supplemental environmental review is required,”  
27 these comments broadcast to the State Board the need for such review. The State Board admitted that it  
28 had “made revisions to the [2012 Waiver] significantly,” SB 6480, and it had the opportunity to

1 respond to the public’s comments by calling for additional review or justifying its refusal to conduct  
2 further analysis. It failed to do so.

3 Prior decisions by California courts show that the comments raised to the State Board were  
4 sufficient to exhaust Petitioners’ CEQA claim. For example, in *State Water Resources Control Board*  
5 *Cases*, the Court of Appeal held that the petitioners exhausted a claim about the State Board’s  
6 inadequate analysis of environmental effects by raising the issue’s substance before the Board. 136  
7 Cal. App. 4th at 795. “Although the . . . parties did not use the magic words ‘the EIR is inadequate,’  
8 they did bring to the Board’s attention their position that the record before the Board did not contain an  
9 adequate analysis of the [project’s] potential impact[s].” *Id.* Similarly here, comments addressing the  
10 substantial changes to the project and the State Board’s inadequate analysis of those changes’ effects  
11 are sufficient to exhaust Petitioners’ CEQA claim.

12 Likewise, in *Center for Biological Diversity v. County of San Bernadino*, the petitioner claimed  
13 that the project proponents failed to include a water supply agreement in their final environmental  
14 impact review, as required by statute. 185 Cal. App. 4th at 879-80, 890. The court held that comments  
15 raising “the issue of whether the [final ]EIR sufficiently addresses water supply” were enough to  
16 exhaust this specific statutory claim, even though the precise legal inadequacy was never cited during  
17 the administrative proceedings. *Id.* at 890 (The “County was apprised of the relevant facts and issues,  
18 and the purpose of the exhaustion doctrine was satisfied without the citation of Water Code  
19 provisions . . .”). Similarly here, though neither Petitioners nor other commenters specifically cited  
20 Public Resources Code Section 21166, they raised the significance of the State Board’s changes and the  
21 Board’s lack of analysis evaluating these changes. And, as discussed above, Petitioners brought critical  
22 new information to the Board’s attention by introducing the U.C. Davis Report.

23 The State Board quotes *Coalition for Student Action v. City of Fullerton*, 153 Cal. App. 3d  
24 1194, 1198 (1984), for the proposition that “[m]ere objections to the *project*, as opposed to the  
25 procedure, are not sufficient to alert an agency to an objection based on CEQA.” State Board Demurrer  
26 (“Demurrer”) at 9; *see also Citizens for Responsible Equitable Envtl. Dev. v. City of San Diego*, 196  
27 Cal. App. 4th 515, 521 (2011) (holding that “general, unelaborated objections” were insufficient to  
28 exhaust a CEQA claim). In both cases, the petitioners’ failure to exhaust lay in their failure to object to

1 specific CEQA analyses that the agencies had affirmatively conducted. In the present case, not only  
2 did the State Board fail to conduct any additional CEQA analysis, it did not even affirmatively  
3 determine that such analysis was unnecessary. As a result, Petitioners have had no analysis or  
4 determination to which they could specifically object.

5 Moreover, the administrative comments in this case are more specific than those in *Coalition for*  
6 *Student Action*. In *Coalition for Student Action*, the court held that “a relatively few bland and general  
7 references to environmental matters” were insufficient to exhaust the petitioner’s CEQA claim. 153  
8 Cal. App. 3d at 1198. Here, public comments raised specific, targeted concerns criticizing the lack of  
9 information about the Modified Waiver’s environmental effects that would result from the State  
10 Board’s changes. SB 6261 (“The significant changes proposed . . . provide insufficient information to  
11 enforce the order or to evaluate the relationship between farm practices and water quality”). In contrast  
12 to the “generalized” environmental comments in *Coalition for Student Action*, 153 Cal. App. 3d at  
13 1197, the targeted, substantive public comments here were sufficiently specific to apprise the State  
14 Board of Petitioners’ concerns regarding the inadequate impact analysis.

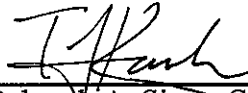

15 In conclusion, the exhaustion doctrine simply seeks to ensure that agencies have the opportunity  
16 to address issues before litigation, and therefore requires a petitioner to bring the substance—or “true  
17 character”—of its eventual challenges before the agency during the administrative process. *State Water*  
18 *Res. Control Bd. Cases*, 136 Cal. App. 4th at 792-93. Petitioners are not required to tick through whole  
19 chapters of the California Code to preserve potential issues for judicial review. Here, the State Board  
20 had a fair opportunity to respond to the public’s comments describing the significant changes to the  
21 2012 Waiver and lamenting the absence of an adequate impact analysis. These comments apprised the  
22 Board of the public’s concerns regarding the need for additional environmental review and were  
23 sufficient to exhaust Petitioners’ CEQA claim.

24 **III. The Petitioners’ Prayer for Relief Properly Requests a Peremptory Writ of Mandate, as**  
25 **Provided by California Water Code Section 13330.**

26 The State Board mischaracterizes the Petitioners’ prayer for relief as a request for declaratory  
27 judgment. The prayer for relief, however, is for “a peremptory writ of mandate,” Amended Verified  
28 Petition for Writ of Mandate (“Amended Pet.”) at 18 (line 16), which is the proper administrative

Attorneys for PETITIONERS

1 **PROOF OF SERVICE**

2 LYNDA F. JOHNSTON declares:

3 I am over the age of eighteen years and not a party to this action. My business address is 559  
4 Nathan Abbott Way, Stanford, California 94305-8610.

5 On February 19, 2015, I served the foregoing **PETITIONERS' OPPOSITION TO**  
6 **DEMURRER OF RESPONDENT STATE WATER RESOURCES CONTROL BOARD TO**  
7 **AMENDED VERIFIED PETITION FOR WRIT OF MANDATE** on all persons named below by  
8 placing true and correct copies thereof for Federal Express next-business-day delivery at Stanford,  
9 California, addressed as follows:

10 Kamala D. Harris  
11 Attorney General of California  
12 Tracy L. Winsor  
13 Supervising Deputy Attorney General  
14 Matthew J. Goldman  
15 Deputy Attorney General  
16 1300 I Street, Suite 125  
17 P. O. Box 944255  
18 Sacramento, California 94244-2550

19 *Attorneys for Respondent California State  
20 Water Resources Control Board*

21 Theresa A. Dunham, Attorney at Law  
22 Nicholas A. Jacobs, Esq.  
23 Richard Deitchman, Esq.  
24 SOMACH SIMMONS & DUNN  
25 500 Capitol Mall, Suite 1000  
26 Sacramento, California 95814-4742

27 *Attorneys for Respondent-Intervenors  
28 Grower Shipper Association of  
Central California, et al.*

Jason E. Resnick, General Counsel  
WESTERN GROWERS
